- Coin Flip
- Goal Formula
 - The goal average of a team is to be determined by dividing the total number of goals for and against into total number of goals for, with the team having the highest percentage winning the higher position.
 - Example: For 10 goals, against 4 goals – Percentage $10/14 = .714$
 - For 10 goals, against 5 goals – Percentage $10/15 = .667$
 - The .714 goal average wins the tiebreaker.
- Wild card team will be determined:
 - Points
 - The team with the best goal average (defined above) determines position.
 - The team with the least goals against.
 - The team with the most goals for.
 - The team with the least penalty minutes.
 - Coin flip
